

Stubben SEQ Soft Touch Spur

 [click to enlarge](#)

Made of flexible stainless steel that allows the rider to form the spur to their individual size, need, and comfort; this flexibility allows SEQ spurs to fit both men and women. Covered in a non-slip material that also protects boots. The wheels of the unique Soft Touch spurs are shaped in a way that all points are identically rounded to make them smooth and soft. The special design of this **rowel** allows for a faster rotation of the wheel, encouraging a better and softer leg aid: the rider can simply place the spurs on the horse's side while the lower leg can remain absolutely still. Due to the movement of the horse, the **rowel** will rotate and run across the horse's side by itself. These spurs allow the rider to give more accurate and precise aids. 20mm or 35mm neck. (Stubben 1152, 1153 Steeltec)

The roller ball ends rotate

Ladies Roller ball spurs

The Mark Todd roller ball spurs are a very popular spur, and allow the rider to encourage the horse forward without the risk of marking his sides. The roller ball end of these spurs gives the rider the opportunity to move the spur along the horses side easily, without jabbing him.
